

## Restaurants in Kampala.

Namutebi Jamillah Mago. 15/U/922. 215000228.

May 21, 2017

## **1 Introduction:**

Currently in Kampala, restaurants seem to be the main deal of the day as more and more people, foreigners and locals, come up to open new restaurants in different locations of the city. The area of study and data collection for this concept are a few of the most known restaurants currently in Kampala city.

## **2 Brief Background:**

Restaurants have been in existence since time memorial, the only difference they have as years go by is how meals are prepared and the different forms of architecture and design that are used in their establishment. Some locals prefer the old form of wood and iron sheets as seen in down town suburbs, while the foreigners exhibit experienced and breath-taking designs, which seem to be preferred by many for purposes of lifestyle, and say, need to try out new things.

## **3 Problem Statement:**

If you are to go say four years back, Kampala city had just a few restaurants in very few locations. But as of now, many have been opened and more of which are still being built up. This study identifies some of these restaurants and gathers basic information that is usually paid less attention to by many Ugandans.

## **4 Objective of the Study:**

The objective for conducting this research is to gather basic information about the restaurants in Kampala such as the number of branches each restaurant has, the location of the restaurant's main branch, the specific types of cuisines prepared and whether or not the restaurant includes a bar section.

For example, if you are to analyse Cafe Javas, it has seven branches in Kampala (that is: Javas City Oil Kira road, Javas Nakawa, Javas Bombo road, Javas Namirembe road, Javas Kampala Boulevard, Javas Cargen House), it's main branch is at City Oil - Kira road, it offers mainly European cuisines, and it does not have a bar section.

## **5 Methodology:**

Data for this study is going to be collected using a Data Collection Application that is to be installed on the data collector's phone. The application contains sections that are to be filled in by the collector. These sections include 'the name of the restaurant', 'number of branches it has', 'location of its main branch', the

'main types of cuisines provided', and whether or not it is both a bar and restaurant. The data collector will also have to add a few images showing how the restaurant was physically designed.
